MILK COOLERS

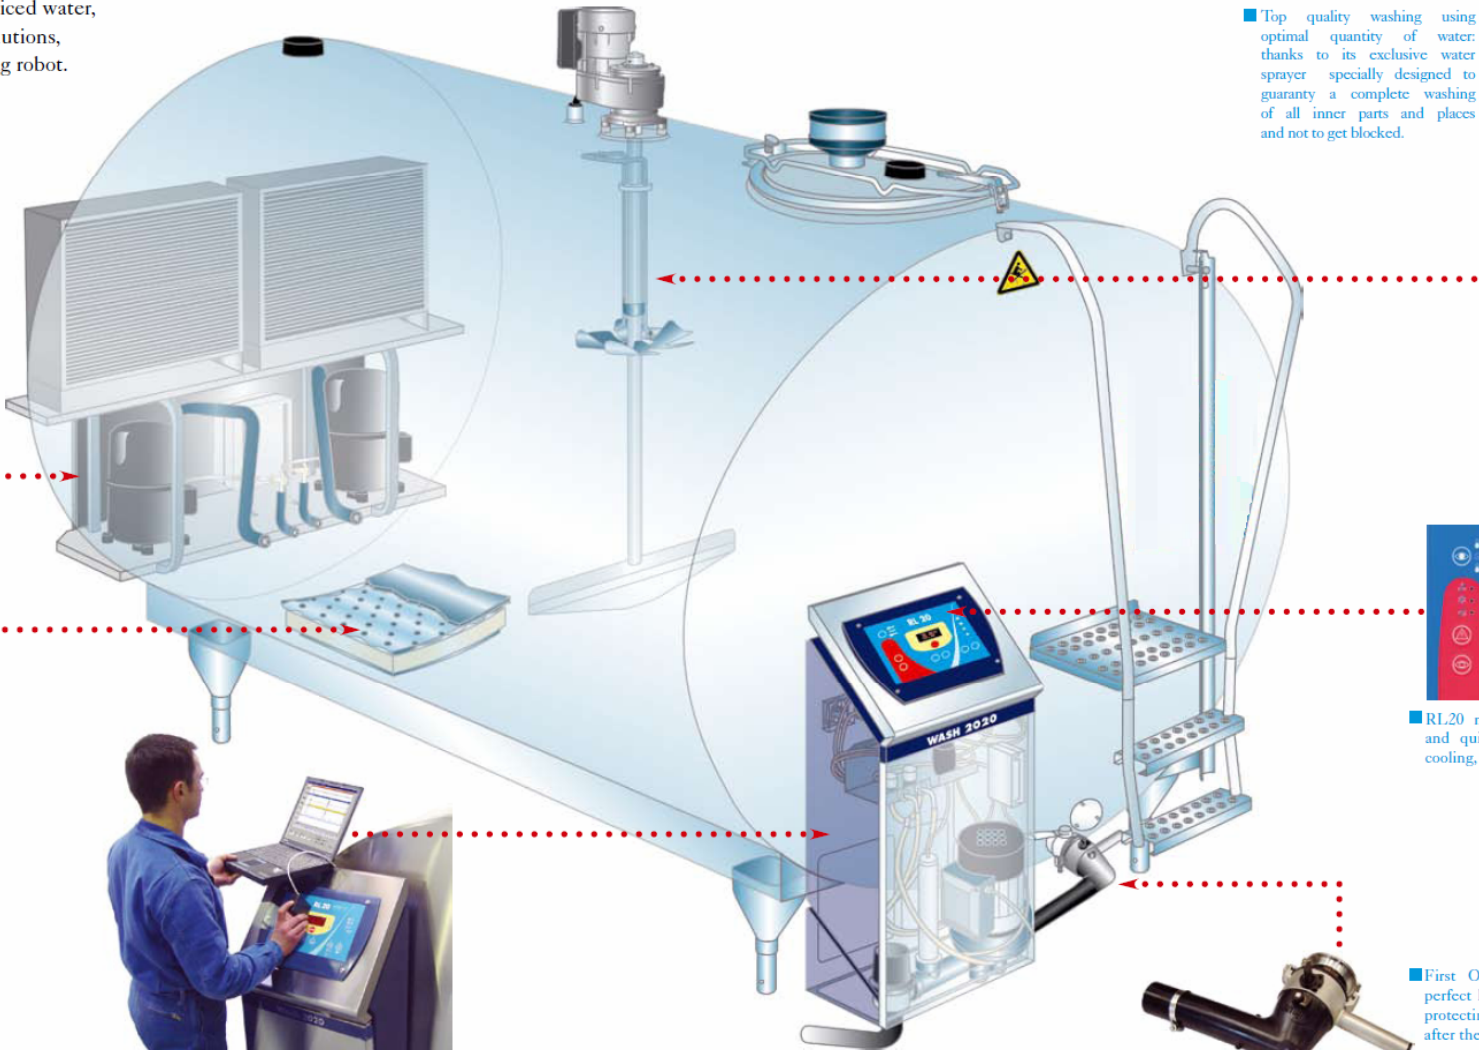

FIRST SE, THE MILK COOLER WITH AUTOMATIC WASHING SYSTEM IS A BEST-SELLER IN FRANCE

FOR ENHANCED MILK QUALITY CONTROL

- From 900 to 30,000 litres, 26 capacities are available to meet your requirements for milk production and collection frequency,
- High cooling speed: for preserving milk in the best way and meeting the most strict requirements,
- An equipment with exclusive automatic washing system: the guarantee of perfect hygiene,
- Modular design allows you to separate the cooling unit: all types of installation are possible,
- Adaptable to a cooling system using iced water,
- Can also be used with alternative solutions,
- Can be used with any type of milking robot.

- Easy to maintain :
No complex and long disassembling ,
all components are fully accessible.

- Top quality washing using optimal quantity of water: thanks to its exclusive water sprayer specially designed to guaranty a complete washing of all inner parts and places and not to get blocked.

- RL20 monitoring panel. User friendly and quick access to main parameters: cooling, washing and agitation.

- First Outlet (patented): guarantees a perfect hygiene of the outlet thread by protecting it from dirt and washing it after the milk collection.

- First Audit: A daily follow-up tool for inventorying and analysing the milk cooler operation (power supply, milk and washing water temperatures, washing cycles...); for a better use of the milk cooler and the improvement of the milk quality.

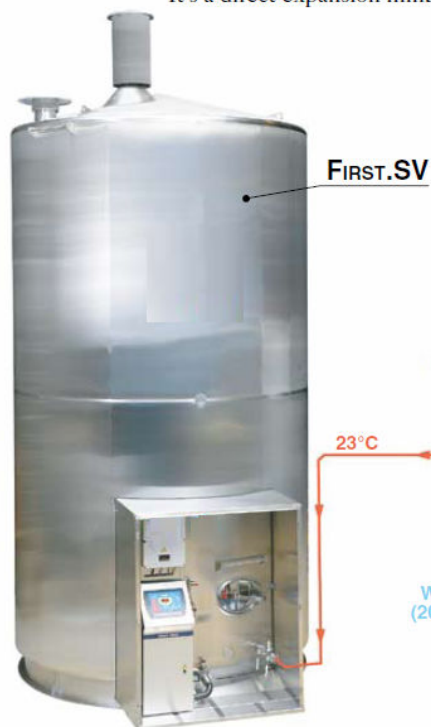

MILK COOLERS

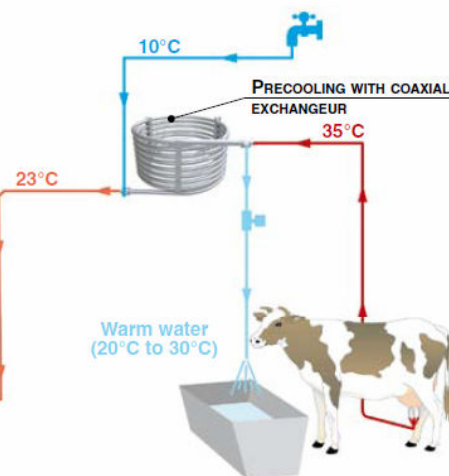

VERTICALS MILK COOLERS

RANGE FROM 8000 UP TO 40 000 LITRES

The First.SV is done for an outside installation on a minimum ground surface.
It's a direct expansion milk cooler that can also be used with precooling:

- Use a cold water source ...
- Reduce the electric power required ...
- Spread your electricity consumption ...
- Accelerate the cooling of the milk ...
- Cool very large volumes of milk ...

MOBILES MILK COOLERS

DIRECT EXPANSION OR CHILLED WATER

- The trolley which carries the cooler, whether vertical and cylindrical (MS models) or horizontal and elliptical (MSE models), meets European road standards; it is absolutely perfect for both collecting and transporting the milk.
